The fleece weight from mature females ranges from 8 to 12 pounds with a yield of 65 to 80 percent. The staple length of the fleece ranges from five to ten inches with a numeric count of 36 to 48 which is 38.5 to 30.0 microns.

Border Leicesters are typically shown with 3-5 months of wool growth, so that the judge can accurately evaluate the fleece, one of the most important characteristics of the breed. They are relatively easy fit for exhibition. They should appear clean and neat, but never shampooed, as this would remove the natural oil from the wool. A light spritzing with Luke warm water can emphasize the natural curl of the fleece, but it needs to be done well before the show so that the dampened locks have time to dry thoroughly. Stray locks may be trimmed, but Border Leicesters should not be combed, carded, or blocked, which would disturb the natural lock formation and detract from the character of the fleece.

A ram at maturity should weigh 175-300 pounds and stand about 32 inches at the shoulder. He should have a wide, level back. Ewes usually weigh 150-225 pounds.
